CABINET CARE

Please do not hesitate to call Ecowood Cabinets for additional information.

- Clean at least once monthly to protect wood and bring out its natural beauty by wiping surface with a clean damp cloth, then dry.
- Never use kitchen cloths or sponges that might have detergent or grease on them.
- To remove soil or grease, use suds from common dishwashing liquid (not detergent). Wipe clean with damp cloth. Dry thoroughly.
- During routine kitchen use, immediately dry cabinets near sink, range, dishwasher, oven, and baseboards where water splashes and spills often occur to prevent damage to your cabinetry finish.
- To protect your cabinets' finish, never use cleaners containing bleach, ammonia, or abrasives on your cabinetry.
- Most cabinet scratches can be touched up with a touchup marker.
- If scratches or nicks still show after using a touch up marker, use a filler pencil. Simply rub the pencil overfilling the scratched area and wipe away excess with a clean soft cloth. Then apply a protective coating of clear fast dry touch up (available in the paint section of your local hardware store).
- Never use sandpaper or any other type of abrasive paper or material to even out a scratch, as it will damage the cabinet finish.

Basic care and cleaning will protect your cabinet's beauty
for years to come.
